Subject: Bristol Metals (82-0032) - Insignificant Activity Request

Brian,

The plasma cutter will be operated on a downdraft table designed to pull fumes away from the operator, which are generated during the cutting of metal. The collected fumes will then be routed to the dust collector for filtration, before being exhausted back into the building. In order to ensure worker safety and to prevent over-exposure to the fumes, the plasma cutter will be designed with an interlock system that will not allow the plasma cutter to operate, without the dust collector being in operation.

We hope this information is sufficient for your needs. If you have any questions or need any additional information, please let me know.

Thank you,
Julie
